**Subject:** RE: late Friday afternoon UMass update

I wondered if the freezer and fridge could be stored in the storage area? They need to be plugged in but as long as we have access to that area it might be better than having the units in the same room as us or Chris, due to the fact that they not only throw a lot of heat but they make a fairly loud humming when the compressor is running.

**Subject:** late Friday afternoon UMass update

Hi all,  
Mr Nathhorst dropped in to our office without a prior appointment (3:15 p.m.). Suzanne and Carolyn were gone for the day.

He stated he needs to connect with the vaccine manager (Bob Morrison) regarding the storage of the refrigerator and freezer.

Regarding the timeline he related to us that all personal and other items that are to be saved from the vaccine distribution area – need to be removed as soon as feasible so that he can begin demolition there.
